## Job Application for Software Engineer

Dear Hiring Manager,

### About Me

---

I am a Software Developer with hands-on experience in the industry. I attended school in Edmonton, graduated in early 2017, and have since been working in the field. My enthusiastic and supportive nature is integral to maintaining a collaborative solution-driven environment. Previous performance in lead developer roles has allowed me to influence the successful release of projects directly. I have a proven record of completing assigned tasks from a remote office.

### Why Me?

---

Over the course of my career, I've broadened my skills in object-oriented design patterns, test-driven development, and collaboration with colleagues. This knowledge has enhanced my proficiency in writing easy to read, well-modularized, efficient code. Beyond that, I am familiar with setting professional goals and achieving them. I have a proven track record of being able to conceive, plan, develop, and execute strategies resulting in well-written software. While I do not have professional experience working in cryptography, I am a fast learner and am incredibly motivated. Although I live in Canada, I know that my development skills, coupled with my ability to work hard and be positive, will be of immediate value to Rescale.

### Why Rescale?

---

I came across your job posting on HackerNews and was immediately intrigued. I have always been in support of consistent privacy for users across the internet. In my opinion, the ease at which other people can track and see what we do across the internet is one of the most significant issues facing our society. It dramatically enhances the ability to perform mass surveillance and gives large organizations much more information about people than they would otherwise be able to get. Furthermore, I have always been interested in making high-quality software. Ever since I took my first software engineering course, I have been fascinated by the use of design patterns, object-oriented principles, and clean-code techniques to make software more natural to read and less prone to bugs. It is primarily for these reasons that I hope you look kindly on my application for the Server Developer position that you have open.

Sincerely,

**Tyler Kuipers**
