Job Application for Software Engineer

Dear Hiring Manager,

About Me

I am a Software Developer with hands-on experience in the industry. I attended school in Edmonton, graduated in early 2017, and have since been working in the field. My enthusiastic and supportive nature is integral to maintaining a collaborative solution-driven environment. Previous performance in lead developer roles has allowed me to directly influence the successful release of projects. I have a proven record of successfully completing assigned tasks from remote locations.

Why GitHub

The company that I am currently working for uses Azure DevOps. The problems that Azure DevOps solves and the scale at which they address them is intriguing to me. I was inspired to reach out about this job posting after seeing how useful Azure DevOps can be for enabling collaboration across teams. My preference and ability to work remotely would also make me an excellent fit for GitHub. Furthermore, GitHub and Microsoft also contribute a lot to the open-source software movement, which aligns closely with my values.

Why Me?

Over the course of my career, I've broadened my skills in object-oriented design patterns, test-driven development, and collaboration with colleagues. This knowledge has enhanced my proficiency in writing easy to read, well-modularized, efficient code.

Beyond that, I am familiar with setting professional goals and achieving them. I have a proven track record of being able to conceive, plan, develop, and execute strategies resulting in well-written software. My development skills, coupled with my ability to work hard and be positive, will be of immediate value to GitHub.

Sincerely,

Tyler Kuipers
